ST-650

Disinfecting system provides a 360-degree clean

Reducing the workload of
the clinical team

The ST-650 achieves a 99.9% reduction of Staphylococcus, Escherichia coli, MRSA, and CRE on hard, nonporous surfaces.

Now more than ever during the ongoing global fight against COVID-19, it is critically important for medical and customer-facing environments to implement and enforce hygiene & sanitization protocols to prevent the spread of infection. However, washing hands and wearing a mask is not enough to prevent infection when clean hands touch contaminated surfaces.

The revolutionary ST-650 UVC disinfection system by Seal Shield™ is the first of its kind 360-degree LED UV C disinfection and mobile device management application for adequate disinfection in any environment.

The ST-650 provides a simple all-in-one solution for UV-C disinfection, and device management, with 'smart' technologies that simplify and reduce otherwise manual processes. Our patented UV C disinfection technology offers unmatched disinfection, efficacy, speed, and safety with simultaneous multiple device capacity. The ST-650 UV disinfection system is compatible with most handheld electronic devices, and many other forms of high-touch items and/or equipment.
